Schedule A
to Voluntary Amendment of August 5, 2004

Specification as amended:

[0035] Figs. [5a] 5A through [5e] 5E shows illustrative alternative simple geometric shapes of the polymer composite endcap 14 of the present invention.

[0047] The light-weight polymer composite endcap 14 of unitary construction has a wall thickness 15 preferably less than 0.1 inches and is generally of uniform thickness along its cross-section. The cross-sectional shape is simple in geometry as shown in Figures 3, 4 and [5a-5e] 5A-5E. Typical shapes while not limited to the shapes shown in [Figs. 5a through 5e] 5A through 5E, may be generally described as straight, dimpled inward, or dimpled outward as shown.
